

Innovative daisy chain with loops made of the single-layer Dyneema webbing, equipped with a screw gate carabiner [NIMBLE EVO SG](#), specific for multi-pitch sport routes, crags and for mountaineering in general.

Ideal, on multi-pitch routes, for self-belaying at stances, for abseiling and as an étrier. In crag climbing it can be used as a lanyard for self-belaying and for the following descent from a belay station with a lower-off ring.

Main features:

- equipped with an innovative loop for the connection to the harness (registered design), with six wide intermediate loops and a sling at the end;
- the special construction guarantees a constant 24kN-rated strength: from end to end, for each single intermediate loop or connecting two or more intermediate loops;
- this single-loop-based construction reduces the chance of error and the danger of it moving out of the anchor, typical of traditional daisy chains.

## TECHNICAL FEATURES

Breaking load 24 kN	Single loop 24 kN	Length 100 cm	 120
